Information

ENDO-NAHT MSD NEY

The suturing system consists of a suture guiding tube and a needle-thread combination (SERAFast® violet USP 3/0 / EP2) with a special double-curved needle.

The guiding tube is made of surgical steel and has an outer diameter of 2 mm and a structured handle. A special feature is the fixation slot, into which the specially formed needle can be locked in place when necessary.

MSD NEY special needles

The special MSD NEY needles DSSB-24 have a cutting needle body with an extra slender bevel and a 3/8 double curve with a 24 mm curve length.

They are available in a left- and right-turning shape.

MSD NEY knot slider

The knot (e.g. Roeder knot) is tied using the extracorporeal technique and placed at the closure site with the aid of the special MSD NEY knot slider.

Suture material

SERAFAST® is the right choice for indications with a short wound healing time, when all the advantages of monofilament sutures count.

Material  POLYGLYKOLIC ACID CAPROLACTONE

Suture symbol  violet, monofilament, absorbable

Suture size USP 3/0
EP 2

Absorption profile At least 50% residual tensile strength after 7 days,
completely absorbed after approx. 90 days
